GILBERT PERRIN

VP, Design & Innovation
SOPHiA GENETICS

PRODUCT · DESIGN · ENGINEERING + AI

OPEN TO ADVISORY MANDATES

Everyone solves problems. I make sure we're solving the right ones.

I lead product, design and engineering teams that turn complex data into software people trust. Tenth employee at SOPHiA GENETICS, now more than 400 people.

Part scientist, part designer, part engineer, and a **leader who makes the call**. I'm most useful where those meet: products built on dense data, where mistakes are costly, from private banking to clinical genomics. When the data is incomplete, I still decide, explain why and own the outcome. I have led organisations of up to **25 people** across development, product and design.

English
professional working proficiency

WHAT I CAN HELP WITH

Make complex data clear AI-ACCELERATED

When your users are experts working with dense data, I design the views that make it readable at a glance. I did it for clinicians, with genomic viewers and visual variant analysis; for the International AIDS Society, with a world map of HIV cohorts; and first as a physicist, turning simulations into decisions.

SOPHiA GENETICS · International AIDS Society · Spie Batignolles

Analytical reports & dashboards AI-ACCELERATED

When decisions depend on scattered data, I build the dashboards that put it in one place: product, engineering and customer metrics that let a leadership team arbitrate quickly. Done for a clinical genomics platform, now with AI, and before that for telecom market analysts.

SOPHiA GENETICS · BIPE Sirius

Build the prototype, then scale it AI-ACCELERATED

When an idea needs proof before a team commits to it, I build the first version myself, then lead the team that takes it to production. A multimodal prototype for oncologists and a gene/transcript viewer both went that way into a clinical platform; today my team tests ideas with users before development starts.

SOPHiA GENETICS

Turn data into a product

When your data could be a product in its own right, I help shape it: the data model, the concepts and the platform around them. With the CTO, I set a clinical genomics platform on that path, a direction the company still follows. Earlier, I built portfolio platforms for private banks and a production workflow for Swiss TV.

SOPHiA GENETICS · Odyssey Financial Technologies · RTS

Scale a product & design team

When your product team needs to grow, I have done it at every size, from 4 to 25 people: developers, Product Owners and UX/UI designers in one organisation. I led the one that took a new clinical web platform to the start of customer migration, and today I run a small team working as an R&D unit.

SOPHiA GENETICS

Build products with AI inside

When you want AI in a product where mistakes are costly, I design it so people can trust it: grounded in curated evidence, every citation checked, the expert making the final call. That is how my team built a generative-AI assistant for clinical variant interpretation, alongside internal AI tools for requirements and documentation.

EDUCATION

Computer Science (Algorithms, Languages, Databases)
Master, highest honours · 1998

Mechanical Energy (Thermodynamics & Fluid Mechanics)
Master, honours · 1994

Engineering School (Power Systems, Physics & Numerical Modelling)
Master · 1993

Mathématiques Sup/Spé
Classe Préparatoire · 1990

BACKGROUND

My roots are in science and physics: **thermodynamics, fluid mechanics, heat transfer**, and the fundamentals underneath them. I started out running finite-element simulations in FORTRAN. A second master in **computer science** moved me into software: telecom, private banking, broadcast. A year out for **photography** gave me the visual side. **Data visualisation** is where the three meet.

HOW I WORK

BEFORE

Clarify first

Speed matters less than direction. I make sure the team is solving the right problem before anyone writes a line.

THEN

Build it myself

I prototype the first version hands-on, with AI as a daily tool. Deep enough to direct it, fast enough to ship before the spec is done.

THEN

Scale through teams

I grow the team that takes what works to production, and delegate with the credibility of having built it.

ALWAYS

Data into stories

Complex datasets turned into clear interfaces people actually use. Advanced dataviz libraries have been my core tools since 2012.

CAREER

2025-now	**Head of Design & Innovation, Vice President** · SOPHiA GENETICS
2023-25	**Head of Platform Product & Engineering** · SOPHiA GENETICS
2020-23	**Head of Platform Product & UX** · SOPHiA GENETICS
2020	**Product Manager** · GenomSys
2019-20	**Deep Learning** · independent study
2018-19	**VP Functional & UX Design** · SOPHiA GENETICS
2015-18	**Head of Front-End Development** · SOPHiA GENETICS
2013-15	**Data Visualisation Engineer** · SOPHiA GENETICS
2013	**Data Visualisation & Web Developer** · International AIDS Society
2009-12	**Senior Software Engineer** · Pictet Asset Management
2008-09	**Photography** · independent study
2007-08	**Senior Software Engineer** · RTS - Radio Télévision Suisse
2006-07	**Senior Software Engineer** · Neo Technologies
2004-05	**Senior Software Engineer** · Pictet & Cie
2004	**Entrepreneur & Developer** · DALIN Software SA
2000-04	**Senior Java Developer** · Odyssey Financial Technologies
1998-00	**Java Developer** · BIPE Sirius
1995-97	**Thermal Engineer** · Spie Batignolles
